

Education is broken

RoundGlass Learning Journeys

A new way to **EXPERIENCE** learning

How do we prepare the 14-19 year old for life of wellbeing in The Creative Age?

We move tradition education → EXPERIENCE journeys...

Education → *Learning*

Generic → Personal

Pushing → Fishing

Silos Vs Ecosystems

Factory → Studio

TextBook → Real World

p. 9 - 'Right eye for Amazon' - So we're Sep in late 70s. So why Sony record of rock garden, Sweden at the?

p. 8-11 - Link: faith & not faith

21 - The entire chelid (Sadow & Mar. p. 20 on page 22 for details. Name & Sadow 20 & 21 & Sadow & Mar. filling with

24 - Ark: 'Fossilizing Spain.'

Ask - Why have there be a kind? What not have pretty be in what rock garden

31 - All these references to Thales & Heracles

36 - Review of past - fossilizing plant's climate

p. 57 - Novi Sumerus - fossilizing of edips

Rock - Bill's - 'Fossilization of fossils body fossilized Smith (104, ch.)' - 'Pilot' - Service & Medicine. For the impact of the physical?

p. 101 - Goldfish - 'infinite of Mexico' - 'a new way of viewing nature in relation to universe - Revolutionize consciousness

116-117 - Ark: 'The utility of writing' - 'L. t's only measure its beauty'

132 - Ark: 'Virtue of the Vegetation in Fossil' - 'Kitchener

Ask - What do chapter heading have to do with content of chapter? - 'Opposite' - Bill's. Return

254-6: Ark - 'Scene of Babe & d. d. Chomsky. Men

112 ECOSYSTEMS: FUNCTIONAL ASPECTS

plants, in other words, he must interfere with succession.

An interesting ecological aspect of this type of community is that forest fires are necessary for a pine forest to maintain itself. If protected from fire, the pines are often succeeded by broadleaved trees. Forestry studies in the 1930s indicated how fire affects longleaf pines. The seedling of this pine is covered by a bushy canopy of needles and is always in danger of being shaded by rapidly growing broadleaved trees. In addition, the seedling is unable to grow up on its needles. If the canopy is removed, the pines grow up and the forest is maintained. The seedling of this pine is covered by a bushy canopy of needles and is always in danger of being shaded by rapidly growing broadleaved trees. In addition, the seedling is unable to grow up on its needles. If the canopy is removed, the pines grow up and the forest is maintained.

For this reason, man uses early succession stages for the production of hardwoods or for certain crops like the pines just described.

Man has experienced a mixture of success and failure in his attempts to modify ecosystems for his long-term benefit. The misuse of soil, excessive timbering and grazing practices, and indiscriminate use of insecticides represent failures. Success has been attained in a few areas like wildlife and forestry management. Fire cultivation is an example of the successful manipulation of the earth ecosystem. Unfortunately, success from overexploitation and pollution are increasing at an alarming rate as the result of man's greater power to change the face of the earth and his rapid increase in numbers.

As biologists have attained a better understanding of ecosystems, they have attempted to integrate their activities with those of nature. Problems as water pollution, erosion, overgrazing, and deforestation are receiving serious attention. The Law of Thermodynamics is now being used to design ecosystems that are more efficient.

players throughout the book, assuming that the population is understood. Thus, a population is a group of individuals of a self-perpetuating group of organisms, whereas in ecology a population is defined as all of the members of a species inhabiting a particular area. A population, however considered, is a biological unit and in this section we discuss a few of its major features.

A population consists of individuals, and thus the study of its features are a reflection of the characteristics of its members. A population also has a number of unique traits that are an outgrowth of its being a statistical concept or entity. We shall consider these quantitative aspects first.

Density. Density refers to the number of individuals per unit of area (or volume). Five meadow voles per acre, two thousand daisies per liter of pond water, 10,000 people per square mile are all expressions of density. This is an important aspect of population study in view of the prior discussion of energy relations and structure in the ecosystem. Notably, this term refers to the production of new individuals, the ability of a population to in-

The Periodic table of wellbeing

Learning has at its core, the periodic table

- Ikigai
- Expression
- Relationships
 - Self
 - Friends & Family
 - Community
 - Environment
- Health
 - Physical
 - Emotional

Ps Physical Act. & Fitness	Rd Resilience to Dis-ease	Sr Satisfying Relationships	Vo Vocation	Pn Passion	Ah Art as Healing	Av Audio/Visual/ Kinetic	Pw Poetry & Writing	Le Label-less Expression
Aw Awareness of Health	Sl Sleep	Vu Vulnerability	Id Identity	Pr Purpose	Dt End of Life/ Death	Ce Collective Empathy	Hu Human Rights	
Hd Healthy Diet	As Awareness of Self	En Energy	DI Dealing with Loneliness	Gr Gratitude	Ca Care	Sf Social Fabric	Hi Holistic Health Index	
		Mi Mindfulness			Ev Environment	Ha Harmony		

Our Approach

Step1 - Turn elements table into fundamental questions

Step 2 - Identify which 5 elementary questions make most sense

Step 3 - Build strategy for activation of the element

Fundamental questions

Why do we grow old?
Why do we die?
What happens to us when we die?
How do people who are dieing think?
How do we die?
How long do people live?
Where do people go when they die?

Who are you? What makes you you?
Why are we different from each other?
What am I not?
What are my fears? Are fears good?

What is art?
What are the uses of art?
What happens if we don't express ourselves?
How is art different from science?
How powerful can art get?
Can art make people change?
What makes people change?

Can healthy food ever be tasty?
Why is sugar so bad?
Why do we have so many desserts then?
Why do people make unhealthy food?
Why do I crave unhealthy food?
Does color play a role in healthy food?
Can food evoke memories?
Eating with people vs eating alone?

From Element to Activation

Measure

Each project is measured against:

SCALABILITY:

Reach and impact? (People) (1-5)

AWE/DESIRABILITY:

How desirable is to the audience? (Interest) (1-5)

STICKINESS:

Engage and share(1-5)

FEASIBLE:

What will it take to execute? (Resource)

(Low/Medium/High)

AFFORDABILITY:

What is the estimate cost \$ (0-15k) / \$\$ (15 - 35k) / \$\$\$

(35k+)

ALIGNMENT:

How much does it align with the vision and element (vision)

(1-5)

Curriculum

SHOCK

delight, surprise, scare,

EMOTION

positive, negative

Starting point: Interesting Key Questions

Broadening knowledge:

A deep understanding:

Short Form / live, talk

Medium Form / Video, Blog

Long Form / Video, Blog

Project Based Learning
