

Transcendent art

Transcendent Art is a designed or intended encounter with an art object for transcendence (mystical growth).

Therefore we can think of the art Object as an **object of transcendence**, that which inspires one to go beyond oneself.

God is imagined as the ultimate object of transcendence → Inspiring us to operate from All selves + All stages of consciousness. However God has been declared dead by the West. What, then is the new object of transcendence for the post-human age?

In their essay, Dr. Karthik Kalyanaraman and Raghava KK suggest possibilities for **a new Object of Transcendence and a new relationship with that object that is relevant to the post-human.**

Transcendent art for us is art that elicits a relationship between the viewer and the artwork, through a designed encounter, with the intention of growing spiritually (intellectually and viscerally).

An encounter with t-art can inspire:

1. **Growth** (loss, liberation, mystery) *see thesis
2. **Possibility** (non-deterministic)
3. **Hope** (exposure to alternate realities)
4. **Inclusivity** (power dynamics between the object and viewer)
5. **Personality** (dynamic and changes unlike a brand)
6. **Vivacity** (feeling alive/ operating From Joy vs For Joy)

Religion is art taken very seriously! - Gino

Individually each artwork is a lived personal conflict. This is called personality. Therefore all personalities put together creates always to resolve binaries

Since every concept has to differentiate itself from one another, they create a natural binary tension with each other, causing an endless loop of infinite conceptual binary's. This forms a web of conceptual possibilities. Now add the concepts manifest conflict to this equation and mathematically you end up with infinite possibilities.

This realization of infinite possibilities is not graspable by our own brains or our bodies. We can only be made aware of its existence true: coincidences ; rational conclusions ; feeling connected and emergence.

Because we cannot grasp infinite possibilities, we either reject it or assign too much value to it.

When rejected, we arrive at Nihilism. The state of nihilism kills vivacity -the quality of being attractively lively and animated.

The antidote to nihilism is personality.

The Personal resolution of binaries using one's own response mechanisms to the environment.

So how does one find their own personal resolution of binaries?

Welcome to Art as Life!
